

Fundamental studies for radar meteorology

Theory of wave scattering by distributed scatterers for remote sensing applications
V. I. Tatarskii
Pages 1-5

Investigation on the weather radar equation at attenuating wavelength
F. S. Marzano and G. Ferrauto
Pages 6-10

A variational method for attenuation correction of radar signal
M. Berenguer, G. W. Lee, D. Sempere-Torres, and I. Zawadzki
Pages 11-16

Detection and removal of clutter and anaprop in radar data using a statistical scheme based on echo fluctuation
J. Sugier, J. Parent du Châtelet, P. Roquain, and A. Smith
Pages 17-24

Error analysis of a polarimetric dealiasing technique for Doppler measurements of the atmosphere
C. M. H. Unal and D. N. Moiseev
Pages 25-30

Estimating errors in the velocities obtained by a multiple bistatic Doppler radar
Y. Takaya, and M. Nakazato
Pages 31-34

Monthly and daily variations of radar anomalous propagation conditions: How “normal” is normal propagation?
J. Bech, B. Codina, J. Lorente, and D. Bebbington
Pages 35-39

Nowcasting and short-period weather forecasting

An investigation of the tipping term as a prognostic tool in short-range thunderstorm forecasting
M. W. Sleigh and C. G. Collier
Pages 40-44

Analysis of convective structures that produce heavy rainfall events in Catalonia (NE of Spain), using meteorological radar
T. Rigo and M. C. Llasat
Pages 45-48

Detecting nocturnal clouds with surface temperature data
T. Grimbacher and W. Schmid
Pages 49-54

The first attempts at the radar echo prediction in the Czech weather radar network
P. Novák, J. Walder and J. Krácmár
Pages 55-58

Mesoanalysis of recurrent convergence zones in north-eastern Iberian Peninsula
R. Pascual and A. Callado
Pages 59-64

Radar study of the microphysics of clouds and precipitation

Airborne Doppler radar observations of convective plumes and radar "fine-lines"
B. Geerts, D. Leon, S. Haimov, and R. Damiani
Pages 65-72

Polarimetric data evaluation in severe storms using two research dual-polarized radars
V. N. Bringi, Y. Wang, and J. Hubbert
Pages 73-77

Real-time measurements and analyses of precipitation micro-structure and dynamics
W. L. Randeu, M. Schönhuber, and G. Lammer
Pages 78-83

Fall velocity and axial ratio of snowflakes
R. Schefold, B. Baschek, M. Wüest, and E. Barthazy
Pages 84-89

Cloud phase detection in winter stratiform clouds using Polarimetric Doppler Radar
D. Hudak, B. Currie, P. Rodriguez, S. G. Cober, I. Zawadzki, G. A. Isaac, and M. Wolde
Pages 90-94

Extraction and analysis of structural features in cloud radar and lidar data using wavelet based methods
M. Quante, G. Teschke, M. Zhariy, P. Maaß, and K. Sassen
Pages 95-103

Influence of disdrometer deadtime correction on self-consistent analytical parameterizations for raindrop size distributions
R. Uijlenhoet, M. Steiner, and J. A. Smith
Pages 104-112

The role of particular rain drop size classes on specific rain attenuation at various frequencies with Czech data example
O. Fiser
Pages 113-116

Polarimetric cloud studies at 3.3 GHz
S. H. Heijnen, H. Klein-Baltink, H. W. J. Russchenberg, and W. F. van der Zwan
Pages 117-121

Quantitative analysis of spectral differential reflectivity in the radar bright band
A. D. Hassiotis, N. C. Skaropoulos, and H. W. J. Russchenberg
Pages 122-125

Cloud radar observations of precipitation
P. Kollias
Pages 126-129

Turbulence and microphysical retrievals in boundary layer clouds using mm-wavelength Doppler spectra
P. Kollias and B. A. Albrecht
Pages 130-133

Drop size distribution retrieval from polarimetric radar measurements
E. Gorgucci, V. Chandrasekar, and V. N. Bringi
Pages 134-139

A model of radar backscattering from the melting layer of precipitation
N. C. Skaropoulos and H. W. J. Russchenberg
Pages 140-143

Radar study of the microphysics of clouds and precipitation

Assessment of storm return periods based on radar data

T. Einfalt and M. Jessen

Pages 144-149

Enhancement of precipitation by liquid carbon dioxide seeding

K. Nishiyama, K. Wakimizu, Y. Suzuki, H. Yoshikoshi, and N. Fukuta

Pages 150-154

Synergetic use of radar with other remote sensing technologies

Dynamic properties of clouds and dynamic/microphysical interactions from 94 Ghz cloud radar and lidar

A. Protat, C. Tinel, and J. Testud

Pages 155-160

Deriving water cloud properties from vertical pointing 95 GHz Doppler radar

J. Meywerk, O. Sievers, M. Quante, V. Venema, and S. Crewell

Pages 161-166

Statistics of non-precipitating daytime clouds, based on 95 GHz cloud radar measurements during the BBC campaign

O. Sievers, J. Meywerk, and M. Quante

Pages 167-172

An enhanced algorithm for the retrieval of liquid water cloud properties from simultaneous radar and lidar measurements. Part I: The basic analysis of in situ measured drop size spectra

O. A. Krasnov and H. W. J. Russchenberg

Pages 173-178

An enhanced algorithm for the retrieval of liquid water cloud properties from simultaneous radar and lidar measurements. Part II: Validation using ground based radar, lidar, and microwave radiometer data

O. A. Krasnov and H. W. J. Russchenberg

Pages 179-183

Microphysical and radiative properties of ice clouds using a cloud radar-lidar algorithm

C. Tinel, J. Testud, A. Protat, and J. Pelon

Pages 184-189

Water vapor observations with SAR, microwave radiometer and GPS: comparison of scaling characteristics

D. N. Moiseev, R. F. Hanssen, and F. J. van Leijen

Pages 190-194

Radar studies of wind and turbulence

Wind-field observations with the operational Doppler radar network in Germany

M. Hagen, K. Friedrich, and J. Seltmann

Pages 195-199

Doppler radar observations of tropical cyclone Dina as it passed near La Réunion on 22 January 2002

F. Roux, F. Chane-Ming, A. Lasserre-Bigorry, and O. Nuissier

Pages 200-205

Determination of quality-controlled three-dimensional wind-vector fields using a bistatic Doppler radar

K. Friedrich and M. Hagen

Pages 206-211

On the missing data problem in raw wind profiler measurements: an algorithm based on functional differential equations

A. Lay-Ekuakille, A. Cataldo, and A. O Trotta

Pages 212-216

Radar estimation of precipitation

Evaluation of a new polarimetrically-tuned Z-R relation

V. N. Bringi, Taiwen Tang, and V. Chandrasekar

Pages 217-221

Rainstorm characteristics derived from weather radar images

I. L. M. De Jongh, G. J. M. De Lannoy, N. E. C. Verhoest, and F. P. De Troch

Pages 222-226

Reconstruction of rainrate fields in complex orography from C-band radar volume data

F. S. Marzano, E. Picciotti, and G. Vulpiani

Pages 227-232

Diagnostics of vertical reflectivity profiles at the radar sites

H. Pohjola and J. Koistinen

Pages 233-237

Rainfall rate estimate from the rain profiling algorithm "ZPHI" applied to X-band polarimetric radar data

E. Le Bouar, J. Testud, and S. Y. Matrosov

Pages 238-242

Vertical profiles of radar reflectivity and rain rate: observational and modeling results

N. Dotzek, J. J. Gourley, and T. Fehr

Pages 243-249

Challenges for precipitation estimation in mountainous regions

U. Gjertsen and J. I. Dahl

Pages 250-254

Radar rainfall estimation: lessons learned from the NASA/TRMM validation program

E. Amitai, D. B. Wolff, D. A. Marks, and D. S. Silberstein

Pages 255-260

High quality velocity data using Dual-PRF

I. Holleman and H. Beekhuis

Pages 261-265

An enhanced precipitation accumulation algorithm for radar data

R. Hannesen and H. Gysi

pages 266-271

Radar and GPV-based consideration on significant indices for detecting heavy rainfall

K. Nishiyama, I. Ishikawa, K. Jinno, A. Kawamura, and K. Wakimizu

Pages 272-276

Evaluation of polarimetric radar rainfall algorithms at X-band

V. Chandrasekar, E. Gorgucci, and L. Baldini

Pages 277-281

Experiment for the radar estimation of precipitation in Serbia

J. Nadj and Z. Vucinic

Pages 282-285

Radar and rain gauge estimates of daily and hourly sums of precipitation for river basins in the Czech Republic

Z. Sokol, D. Rezacová, and P. Pesice

Pages 286-290

Radar estimation of precipitation

The use of the Joss-type disdrometer for the derivation of Z-R relationships

E. A. Baltas and M. A. Mimikou

Pages 291-294

The measured kinetic energy of hailstone by radar and hailpads

N. Pavlovic Berdon and M. Miladinovic

Pages 295-298

A methodology to identify the vertical profile of reflectivity from radar scans and to estimate the rainrate at ground at different distances

M. Franco, D. Sempere-Torres, R. Sánchez-Diezma, and H. Andrieu

Pages 299-304

Systems and quality improvement

Ground clutter characterization and elimination in mountainous terrain

M. Gabella and R. Notarpietro

Pages 305-311

Computer vision methods for anomaly removal

M. Peura

Pages 312-317

A method for estimating antenna beam parameters using the Sun

M. Leskinen, P. Puhakka, and T. Puhakka

Pages 318-323

Use of a fuzzy logic classification scheme with a C-band polarimetric radar: first results

P. P. Alberoni, D. Zrnic, A. Ryzhkov, and L. Guerrieri

Pages 324-327

New data processing in the Czech weather radar network

P. Novák and J. Krácmár

Pages 328-330

The Sivam Project: weather radar network for the Amazon region

M. Malkomes, F. Fukuda, F. Rocheleau, and J. Werner

Pages 331-334

The new radar data processing software for the German Weather Radar Network

M. Malkomes, M. Toussaint, and T. Mammen

Pages 335-338

The Italian radar network: current status and future developments

P. P. Alberoni, L. Ferraris, F. S. Marzano, S. Nanni, R. Pelosini, and F. Siccardi

Pages 339-344

A PC based digital transmitter/digital receiver/digital signal processing system

F. O'Hora and R. Passarelli

Pages 345-347

Considerations for the optimum location of a C-band weather radar in the Athens area

E. A. Baltas and M. A. Mimikou

Pages 348-351

Systems and quality improvement

The application of radar-gauge comparison for bias adjustment of radar observations in an alpine environment

F. Tonelli, G. Galli, and M. Borga

Pages 352-356

BALTEX radar achievements at the end of the main experiment

D. B. Michelson, J. Koistinen, R. Bennartz, C. Fortelius, and A. Thoss

Pages 357-362

CARPE DIEM: EU project

P. P. Alberoni, E. Todini, M. Chandra, M. Lindskog, J. Koistinen, D. Bebbington, B. Codina, V. Levizzani, M. Bruen, N. Gustafsson, D. Zrnic, A. Rossa, and P. Burlando

Pages 363-369

Evolution of the Canadian Operational Radar Network

P. Joe and S. Lapczak

Pages 370-382

Application of MRL-5 radar in bird migration research

L. Dinevich and Y. Leshem

Pages 383-387

A decision support system for the optimal planning of a weather radar network: a case study

R. Minciardi, R. Sacile, and F. Siccardi

Pages 388-393

Polar 55C: an upgraded instrument for polarimetric radar research

E. Gorgucci, L. Baldini, and A. Volpi

Pages 394-399

The weather radar system of north-western Italy: an advanced tool for meteorological surveillance

R. Bechini and R. Cremonini

Pages 400-404

Assimilation of radar into meteorological and hydrological models

Observation operator for Doppler radar radial winds in HIRLAM 3D-Var

K. Salonen

Pages 405-408

Evaluation of a conceptual distributed rainfall-runoff model in the Besòs catchment in Catalunya using radar information

C. Corral, M. Berenguer, D. Sempere-Torres, and I. Escaler

Pages 409-415

Using genetic algorithm for distributed parameters optimisation of conceptual rainfall-runoff model with radar data as a high-resolution input

J. Szturc, A. Jurczyk, and K. Osrodka

Pages 416-421

Comparing data from radar, rain gauges and a NWP model

M. Gabella, G. Galli, J. Joss, and G. Perona

Pages 422-427

UHF-radar investigations of low-tropospheric mesoscale dynamical processes: cases of mistral

V. Guénard, J. L. Caccia, B. Campistron, and P. Drobinski

Pages 428-432

Validation and parametrization of atmospheric models with radar data

Event-oriented radar verification of convective precipitation simulated by NWP model

D. Rezacova, Z. Sokol, M. Kaspar, and P. Pesice

Pages 433-437
